This document is a printed form of MSC2020, an MSC revision produced jointly by the editorial staffs of Mathematical Reviews (MR) and zbMATH in consultation with the mathematical community. The goals of this revision of the Mathematics Subject Classification (MSC) were set out in the announcement of it and call for comments by the Executive Editor of MR and the Editor-in-Chief of zbMATH in July 2016.

How to use the Mathematics Subject Classification [MSC]

The main purpose of the classification of items in the mathematical literature using the Mathematics Subject Classification scheme is to help users find the items of present or potential interest to them as readily as possible—in products derived from the Mathematical Reviews Database (MRDB) such as MathSciNet, in Zentralblatt MATH (zbMATH), or anywhere else where this classification scheme is used. An item in the mathematical literature should be classified so as to attract the attention of all those possibly interested in it. The item may be something that falls squarely within one clear area of the MSC, or it may involve several areas. Ideally, the MSC codes attached to an item should represent the subjects to which the item contains a contribution. The classification should serve both those closely concerned with specific subject areas, and those familiar enough with subjects to apply their results and methods elsewhere, inside or outside of mathematics. It will be extremely useful for both users and classifiers to familiarize themselves with the entire classification system and thus to become aware of all the classifications of possible interest to them. Every item in the MRDB or zbMATH receives precisely one primary classification, which is simply the MSC code that describes its principal contribution. When an item contains several principal contributions to different areas, the primary classification should cover the most important among them. A paper or book may be assigned one or several secondary classification numbers to cover any remaining principal contributions, ancillary results, motivation or origin of the matters discussed, intended or potential field of application, or other significant aspects worthy of notice. The principal contribution is meant to be the one including the most important part of the work actually done in the item. For example, a paper whose main overall content is the solution of a problem in graph theory, which arose in computer science and whose solution is (perhaps) at present only of interest to computer scientists, would have a primary classification in 05C (Graph Theory) with one or more secondary classifications in 68 (Computer Science); conversely, a paper whose overall content lies mainly in computer science should receive a primary classification in 68, even if it makes heavy use of graph theory and proves several new graph-theoretic results along the way. There are two types of cross-references given at the end of many of the MSC2020 entries in the MSC. The first type is in braces: “{For A, see X}”; if this appears in section Y, it means that contributions described by A should usually be assigned the classification code X, not Y. The other type of cross-reference merely points out related classifications; it is in brackets: “[See also ...]”, “[See mainly ...]”, etc., and the classification codes listed in the brackets may, but need not, be included in the classification codes of a paper, or they may be used in place of the classification where the cross-reference is given. The classifier must judge which classification is the most appropriate for the paper at hand.

00-XX General and overarching topics; collections

- 00-01** Introductory exposition (textbooks, tutorial papers, etc.) pertaining to mathematics in general
- 00-02** Research exposition (monographs, survey articles) pertaining to mathematics in general

00Axx General and miscellaneous specific topics

- 00A05** Mathematics in general
- 00A06** Mathematics for nonmathematicians (engineering, social sciences, etc.)
- 00A07** Problem books {For open problems, see [00A27](#)}
- 00A08** Recreational mathematics
- 00A09** Popularization of mathematics

- 97K30** Graph theory (educational aspects)
- 97K40** Descriptive statistics (educational aspects)
- 97K50** Probability theory (educational aspects)
- 97K60** Distributions and stochastic processes (educational aspects)
- 97K70** Foundations and methodology of statistics (educational aspects)
- 97K80** Applied statistics (educational aspects)
- 97K99** None of the above, but in this section

97Mxx Education of mathematical modeling and applications of mathematics

- 97M10** Modeling and interdisciplinarity (aspects of mathematics education)
- 97M20** Mathematics in vocational training and career education
- 97M30** Financial and insurance mathematics (aspects of mathematics education)
- 97M40** Operations research, economics (aspects of mathematics education)
- 97M50** Physics, astronomy, technology, engineering (aspects of mathematics education)
- 97M60** Biology, chemistry, medicine (aspects of mathematics education)
- 97M70** Behavioral and social sciences (aspects of mathematics education)
- 97M80** Arts, music, language, architecture (aspects of mathematics education)
- 97M99** None of the above, but in this section

97Nxx Education of numerical mathematics

- 97N10** Comprehensive works education of numerical mathematics
- 97N20** Rounding, estimation, theory of errors (educational aspects)
- 97N30** Numerical algebra (educational aspects)
- 97N40** Numerical analysis (educational aspects)
- 97N50** Interpolation and approximation (educational aspects)
- 97N60** Mathematical programming (educational aspects)
- 97N70** Discrete mathematics (educational aspects)
- 97N80** Mathematical software, computer programs (educational aspects)
- 97N99** None of the above, but in this section

97Pxx Computer science (educational aspects)

- 97P10** Comprehensive works on computer science (educational aspects)
- 97P20** Theoretical computer science (educational aspects)
- 97P30** Systems, databases (educational aspects)
- 97P40** Programming languages (educational aspects)
- 97P50** Programming techniques (educational aspects)

97P80 Artificial intelligence (educational aspects)

97P99 None of the above, but in this section

97Uxx Educational material and media and educational technology in mathematics education

97U10 Comprehensive works on educational material and media and educational technology in mathematics education

97U20 Textbooks, textbook research (aspects of mathematics education)

97U30 Teachers' manuals and planning aids (aspects of mathematics education)

97U40 Problem books, competitions, examinations (aspects of mathematics education)

97U50 Computer-assisted instruction, e-learning (aspects of mathematics education)

97U60 Manipulative materials (aspects of mathematics education)

97U70 Technological tools, calculators (aspects of mathematics education)

97U80 Audiovisual media (aspects of mathematics education)

97U99 None of the above, but in this section
